WAYNE GUMBOOTS

With Wayne you get so much more than just a good pair of gumboots. They’ve gone the extra mile to ensure that you get world-class service as well as a quality product because at Wayne the customer is at the heart of everything they do.

Wayne’s comfortable gumboots are engineered to provide hardwearing protection in diverse working conditions. Their range covers the constantly changing environments and hazards of agriculture and forestry, food processing and hygiene, heavy duty and general purpose applications.

Safety features key

STC = With steel toe cap
Without STC = Without steel toe cap
Midsole = Steel midsole
MOQ = Please contact your KAM to discuss minimum order quantities
NP = Non Penetration

Green Footprint = Made with recycled material

* Wayne recommends all gumboots be worn with absorbent, cotton socks.
So much more than just a good pair of gumboots

There is so much more to a good pair of gumboots than quality alone – but you’re only going to notice that if something goes wrong. It’s why we focus on those aspects you don’t see, but truly value as a customer.
Do you have time to be let down?

Of course you don’t. Time is one commodity the working world is always short on. According to a survey done on working professionals in five countries, South Africans spend the most time at the office, with an average of 9.5 hour work days. That’s a 47.5 hour work week. With statistics like that it's not surprising that as many as 88% of employees have a hard time juggling work and play. As a result, it's not uncommon to experience chronic fatigue and exhaustion in today’s working culture.

With this in mind, Wayne understands that their customers need a company they can trust and rely on. A quality product alone is no longer good enough, it's the entire customer experience, from start to finish that really matters.

Wayne is dedicated to establishing strong relationships with their customers through an understanding of their individual needs, adopting a flexible approach and degree of personal contact. They've improved the areas of their business that are important to you, even the aspects you don't think about. It's these aspects that are often unnoticed, until something goes wrong.

Furthermore, Wayne have made selecting gumboots simpler than ever with a new user-friendly catalogue and website. With Wayne you get so much more than just a good pair of gumboots. Rest assured, they've taken care of almost everything, allowing you to concentrate on what you do best.

Wayne, your symbol of confidence.

www.wayne-safety.com
Wayne’s Heavy Duty gumboots provide comfortable and hardwearing protection for some of the toughest working environments. The range covers the high-risk industries of mining, construction and quarries.

Whether you are working above or below ground or simply manning heavy machinery on-site, the Heavy Duty range offers the suitable protection you need.
Egoli 1 - Knee Length Boots

**F1260:** Black upper with toffee sole (Without STC)
**F1270:** Black upper with toffee sole (STC)
**F1280:** Black upper with toffee sole (STC & Midsole)
**F1310:** Black upper with yellow sole (STC) MOQ

Features:
- PVC uppers for optimum flexibility and abrasion resistance
- Available with or without a steel toe cap
- Nitrile PVC sole for durability and protection against fats, oils and chemicals
- The cleated sole design provides SRA level slip resistance and maximum soil release
- Available with and without a steel midsole
- Nylon liner allows for easy cleaning and quick drying for maximum hygiene
- Optimal toe-spring for walking and kneeling

Optional Extras:
- Contour moulded cushion insole to enhance comfort and reduce fatigue
- Fur liner for warmth and comfort in cold environments

THE DIFFERENCE BETWEEN PVC AND PU BOOTS

PVC gumboots are a popular choice because they are economical, dependable and provide protection against a wide range of acids, oils and chemicals. However, Wayne’s range of premium Polyurethane (PU) gumboots are fast becoming a contender within the market place - and with good reason.

Their range of PU gumboots can last up to 3 times longer than PVC boots, they are lighter in weight, thereby enhancing the comfort to the wearer.

Whilst the benefits of PVC gumboots are clear in many cases, PU gumboots do provide greater resistance to the harsher acids, oils and chemicals that are present in some industrial environments.

It is therefore recommended that customers consult the chemical resistance table provided at the back of this catalogue before making a final purchasing decision.
Polyurethane Boots

P2000: White upper with blue sole (Without STC)  
EN ISO and AS/NZS

P2010: Olive green upper with grey sole (Without STC)  
EN ISO and AS/NZS

P2001: White upper with blue sole (STC)  
EN ISO and AS/NZS

P2011: Olive green upper with grey sole (STC)  
EN ISO and AS/NZS

P2002: White upper with blue sole (STC & Midsole)  
EN ISO and AS/NZS

P2012: Olive green upper with grey sole (STC & Midsole)  
EN ISO and AS/NZS

P2020: Black upper with grey sole (Without STC)  
EN ISO, AS / NZS and ASTM

P2021: Black upper with grey sole (STC)  
EN ISO, AS / NZS and ASTM

P2022: Black upper with grey sole (STC / NP)  
EN ISO, AS / NZS and ASTM

P2040: Blue upper with blue sole (Without STC)  
EN ISO, AS / NZS and ASTM

P2041: Blue Upper with Blue sole (STC)  
EN ISO, AS / NZS and ASTM

Features:
- Significantly lighter in weight to enable enhanced comfort and reduce fatigue in order to increase productivity and safety
- Directly enhanced thermal properties provide good insulation against heat and cold
- Durability is expected to be 2 to 3 times longer than PVC as the material has excellent flex, cut and abrasion resistant qualities
- The sole design ensures the highest possible SRC slip resistance rating
- Boots are fitted with a Polyurethane footbed insole for enhanced comfort

</tbody>
</table>

If you are exposed to any of the acids, oils or chemicals that rate 1, 2 or 3 on the table we recommend a PVC gumboot.

The above table should be used as a general guide only. Performance in the actual working environment will depend upon the following: temperature of chemicals, concentrations of chemicals and duration of exposure.
